Every 15 minutes all day

Save alert

You can personalise your alerts to suit your needs.

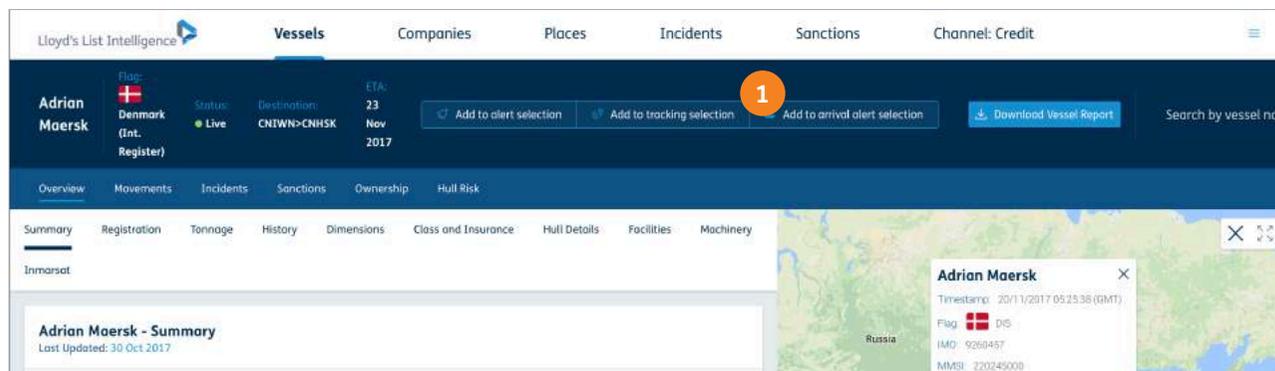

- 1 You can give your alert a personal name that means something to you.
- 2 Select the criteria you would like to be alerted on.
- 3 You can select up to 3 email addresses to receive the alerts if you would like to share information with your colleagues.
- 4 You can also tailor the frequency and recurrence of the alerts to suit your work hours.

Please note that depending on the alert, you will only receive an email if new information is available. For example, ETA and destination updates would not be as frequently changed as location updates.

Setting up arrival alerts

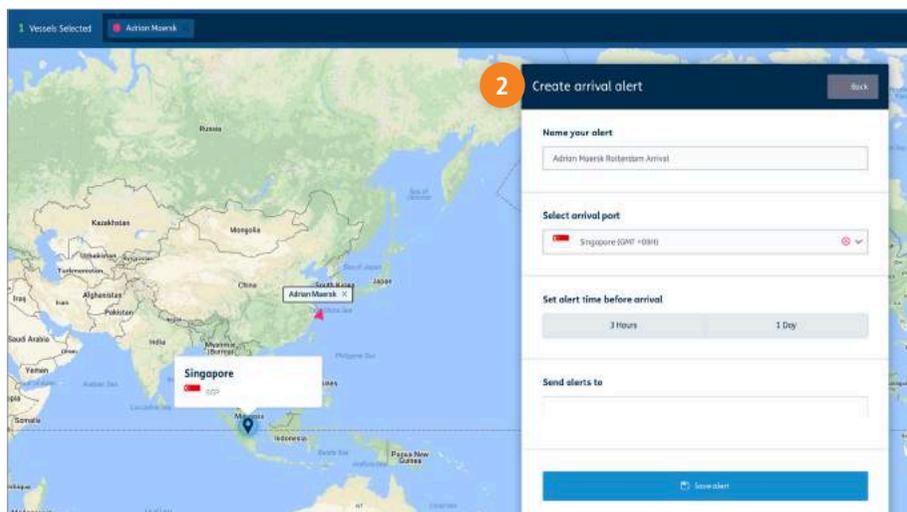

Be notified of impending vessel port calls

Arrival alerts allow you to be notified when a vessel is approaching a port.

- 1 From the vessel overview page, select 'Add to arrival alert selection'.
- 2 To create the alert, simply add a name, select the arrival port by searching the list and selecting how far in advance of arrival you would like to be notified. You can select either 3 hours or 1 day, or both.

You can also set up arrival alerts for your saved vessel lists and directly from your search results.

NB. Arrival alerts are based on the following logic:

If the vessel has a recorded ETA (that it will reach within the next 2 weeks), the alert will be sent out at the 3 or 24 hour period before the stated ETA date.

If there is no ETA for the vessel that it will reach within the next 2 weeks, but is approaching a port that is named as its destination on AIS messages, the logic uses average speed to work out the arrival time and release the alert at the 1 day or 3 hour point.
